## Carbon Monoxide Awareness Week, November 1-7

### Beat the Silent Killer: Prevent CO in Your Home

Peterborough, ON – Prevent carbon monoxide (CO) in your home by getting all fuel-burning appliances inspected annually, Peterborough Fire Services reminds residents during Carbon Monoxide Awareness Week, November 1-7.

“In Ontario, more than 65% of injuries and deaths from CO occur in the home,” said Fire Chief Chris Snetsinger. “We want to make sure everyone is safe from CO. We recommend residents get all fuel-burning appliances inspected by a registered contractor.”

Visit [COSafety.ca](http://COSafety.ca) to find a registered contractor near you.

“You must have a working CO alarm adjacent to each sleeping area of the home if your home has a fuel-burning appliance, a fireplace or an attached garage,” said Chief Snetsinger. “For added protection, install a carbon monoxide alarm on every storey of the home according to manufacturer’s instructions.”

Fuel-burning appliances can include furnaces, hot water heaters, gas or wood fireplaces, portable fuel-burning heaters and generators, barbecues, stoves and vehicles.

If you live in a condo or apartment building with a service room, CO alarms must be installed in the service room and adjacent to each sleeping area of all homes above, below and beside the service room. In condo or apartment buildings that have a garage, CO alarms must be installed adjacent to each sleeping area of all homes above, below and beside the garage.

This information is also available on the City of Peterborough website [www.peterborough.ca](http://www.peterborough.ca).

## What is CO?

- CO is known as the silent killer because it is an invisible, tasteless and odourless gas that can be deadly.
- CO is produced when fuels such as propane, gasoline, natural gas, heating oil or wood do not burn completely in fuel-burning appliances and devices such as furnaces, gas or wood fireplaces, hot water heaters, stoves, barbecues, portable fuel-burning heaters and generators and vehicles.

## Prevent CO in your home:

- Ensure fuel-burning appliances, chimneys and vents are cleaned and inspected annually.
- Check that all outside appliance vents are not blocked.
- Gas and charcoal barbecues should only be used outside, away from all doors, windows, vents, and other building openings. Never BBQ inside a garage.
- Portable fuel-burning generators should only be used outdoors in well-ventilated areas away from windows, doors, vents and other building openings.
- Never use the stove or oven to heat your home.
- Open the flue before using a fireplace for adequate ventilation.
- Never run a vehicle or other fueled engine or motor inside a garage, even if the garage doors are open. Always remove a vehicle from the garage immediately after starting it.

## Know the symptoms of CO:

- Exposure to CO can cause flu-like symptoms such as headaches, nausea, dizziness, as well as confusion, drowsiness, loss of consciousness and death.
- If your CO alarm sounds, and you or other occupants **have symptoms of CO poisoning**, get everyone out of the home immediately. Then call 9-1-1 from outside the building.
- If your CO alarm sounds, and **no one is suffering from symptoms of CO poisoning**, check to see if the battery needs replacing, or the alarm has reached its "end-of-life" before calling 9-1-1.

## Know the sound of your CO alarm:

- Your CO alarm sounds different than your smoke alarm. Test both alarms monthly and make sure everyone in your home knows the difference between the two alarm sounds.
- Don't be confused by the sound of your CO alarm's low-battery warning. Follow your CO alarm manufacturer's instructions so you know the difference between the low-battery warning, the "end-of-life" warning, and the alarm alerting you to the presence of CO in your home.
